Before you invest, you may want to review the Tema Monopolies and Oligopolies ETF (the “Fund”) statutory prospectus and statement of additional information, which contain more information about the Fund and its risks. The current statutory prospectus and statement of additional information dated May 5, 2023 are incorporated by reference into this Summary Prospectus. You can find the Fund’s statutory prospectus, statement of additional information, reports to shareholders, and other information about the Fund online at <http://www.tema.co>. You can also get this information at no cost by calling at 1.888.744.1377. Information on the Fund’s net asset value, market price, premiums and discounts, and bid-ask spreads can be found at <http://www.tema.com>.

The Securities and Exchange Commission has not approved or disapproved these securities or passed upon the adequacy of this prospectus. Any representation to the contrary is a criminal offense.

TEMA MONOPOLIES AND OLIGOPOLIES ETF – FUND SUMMARY

Investment Objective

Tema Monopolies and Oligopolies ETF (the “Fund”) seeks to provide long-term growth.

Fund Fees and Expenses

The table below describes the fees and expenses that you pay if you buy, hold and sell shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example below.**

Shareholder Fees (fees paid directly from your investment)	None
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee	0.99%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.99%
Fee Waiver/Expense Reimbursement ⁽¹⁾	0.24%
Total Annual Fund Operating Expenses After Fee Waiver	0.75%

(1) Tema Global Limited (the “Adviser”) has contractually agreed to waive its fees and reimburse expenses to the extent necessary to keep total annual operating expenses of the Fund (excluding amounts payable pursuant to any plan adopted in accordance with Rule 12b-1, interest expense, taxes, brokerage commissions, other expenditures which are capitalized in accordance with generally accepted accounting principles, and extraordinary expenses) from exceeding 0.75% of the average daily net assets of the Fund until at least June 30, 2024, unless earlier terminated by the Board of Trustees (the “Board”) of Tema ETF Trust (the “Trust”) for any reason at any time. The Adviser may not terminate the fee waiver during the contractual period.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your cost would be:

	1 Year	3 Years
Although your actual costs may be higher or lower, based on these assumptions your costs would be:	\$77	\$291

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may result in higher transaction costs and higher taxes when shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses table or in the Example above, may affect the Fund’s performance. Because the Fund is newly organized, there is no portfolio turnover to report.

Principal Investment Strategies of the Fund

Under normal circumstances, the Tema Monopolies and Oligopolies ETF seeks to achieve its investment objective by investing at least 80% of its net assets, which include borrowings for investment purposes, in domestic and foreign, common and preferred stocks of publicly listed companies where the Herfindahl–Hirschman (HHI) index of the market of operation representing more than 50% of the company’s revenue is above 2,500. HHI index is a widely used and commonly accepted measure of market concentration. HHI is calculated by squaring the market shares of each competing firm and then summing the numbers. The HHI takes into account the relative size distribution of the firms in a market. It approaches zero when a market is occupied by a large number of firms of relatively equal size and reaches its maximum of 10,000 points when a market is controlled by a single firm. The HHI increases both as the number of firms in the market decreases and as the disparity in size between those firms increases. For example, for a market consisting of four firms with shares of 30, 30, 20, and 20 percent, the HHI is 2,600 ($30^2 + 30^2 + 20^2 + 20^2 = 2,600$). The U.S. Department of Justice generally considers 2,500 as the level above which an industry is “highly concentrated”. These companies are considered to operate in a monopolistic or oligopolistic industry structure and occupy a non-substitutable position in an economic value chain if by virtue of, but not limited to, physical assets (e.g., infrastructure), high switching costs, regulation, and economies of scale such that their products and services cannot be easily substituted by the connected participants in the economic value chain. The sub-industry universe includes industries such as rail roads, airports, toll roads, stock exchanges, ratings agencies, data companies, credit agencies, payments companies, certain medical devices, patented pharmaceuticals.

The Fund generally is expected to consist of more than 15 companies but not more than 100 companies. The number of constituents may change depending on the number of companies available for investment that meet the Fund’s criteria.

To be eligible for inclusion in the Fund, a company must have a market capitalization of at least \$100 million and there is no upper limit on the market capitalization of a portfolio company. To be eligible for inclusion in the Fund, a company must have a three-month average daily traded value of at least \$500,000.

A significant portion of the Fund’s assets are expected to be invested in the United States and Canada. The Fund may invest up to 25% of its assets in emerging markets.

The Fund will not engage in currency hedging and is expected to own foreign currency for short periods of time for the purposes of buying and selling non-US listed securities and collecting dividends and/or coupon payments from those securities.

The Fund is classified as a “non-diversified” investment company under the Investment Company Act of 1940, as amended (the “1940 Act”), which means that it may invest a high percentage of its assets in a limited number of issuers

The Fund relies on the professional judgment of its Adviser to make decisions about the Fund’s portfolio investments.

The basic investment philosophy of the Adviser is to seek to invest in companies within the aforementioned thematic universe that are attractively valued when compared to their fundamentals and growth opportunities. The Adviser’s security selection process for identifying companies within the aforementioned theme uses both “top down” idea generation (sector, theme, company research) and “bottom up” security selection (valuation, fundamental, quantitative, qualitative measures) approaches.

In practice “top down” idea generation means fundamental sector research, quantitative tools (for example screening based on metrics such as five-year historic revenue growth, margins, or returns on invested capital) and the Adviser’s own expertise, are used to narrow down the specific thematic research universe.

Once this is defined “bottom up” security analysis involves the Adviser comparing valuation multiples (such as free cash flow yield, price to book ratio and price to earnings ratio or enterprise value to total invested capital, among others) to fundamental metrics (such as organic revenue growth, margins, returns on invested capital and equity, among others). Investments are deemed attractively valued when compared to fundamentals if the valuation multiples are below and fundamentals are above either (1) peers (2) the companies own historic averages (3) or prospective forecasts (as determined by the Adviser). Buttressing this is a detailed fundamental research profile of each company assessing business model, competitive edge, management incentives and track record, and balance sheet.

The Adviser integrates environmental, social and corporate governance (“ESG”) considerations into its investment analysis. This is in support of both the objective of maximizing return and the broader analysis of risks associated with individual companies. The Adviser, however, does not use ESG considerations to limit, restrict or otherwise exclude companies or sectors from the Fund’s investment universe.

ESG factors in this context include, but are not limited to, the impact on or from climate change, natural resource use, waste management practices, human capital management, product safety, supply chain management, corporate governance, business ethics and advocacy for governmental policy.

As part of its investment analysis the Adviser will consider the following, which form part of a holistic assessment of each individual investment opportunity that itself determines selection of the highest conviction securities into the portfolio that the Adviser believes represent the best risk reward for investors:

- The Adviser, as part of its company assessment, will look closely at any material non-financial and ESG related risks that might significantly impair the future financial performance of the company. Such risks will be given equal prominence in analysis to any financial only risks. ESG considerations may not be applicable to all types of instruments or investments.
- Where deemed appropriate the Adviser may engage with companies directly on issues, either through meetings or in written form. This includes but is not limited to improving governance practices, aligning management incentives, and increasing transparency of ESG practices.

In making these considerations the Adviser will use both internal and external data sources and analyses including, but not limited to, those provided by companies directly or by third parties. These considerations also inform monitoring of existing positions.

The Fund may invest in foreign securities listed on foreign exchanges as well as American Depositary Receipts (“ADRs”) and Global Depositary Receipts (“GDRs”). The Fund is classified as a “non-diversified” investment company under the Investment Company Act of 1940, as amended (the “1940 Act”), which means that it may invest a high percentage of its assets in a limited number of issuers.

The Fund may engage in securities lending.

Principal Risks of Investing in the Fund

As with all funds, a shareholder is subject to the risk that his or her investment could lose money. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the FDIC or any government agency. The principal risks affecting shareholders’ investments in the Fund are set forth below.

Industry Concentration Risk: Because the Fund’s assets will be concentrated in an industry or group of industries, the Fund is subject to loss due to adverse occurrences that may affect that industry or group of industries.

Construction and Engineering Industry Risk. Engineering and construction companies may be significantly affected by changes in demand for their specific products or services, government spending, zoning laws, general economic conditions, interest rates, commodity prices, consumer confidence and spending, taxation, demographic patterns, real estate values, labor relations and government regulations. Such companies are also at risk from technical obsolescence and delays in modernization. Certain engineering and construction companies may also be significantly affected by environmental clean-up costs and catastrophic events such as earthquakes, hurricanes, tornadoes and terrorist acts.

FinTech Company Risk. FinTech companies may be adversely impacted by government regulations, economic conditions and deterioration in credit markets. These companies may have significant exposure to consumers and businesses (especially small businesses) in the form of loans and other financial products or services. FinTech companies typically face intense competition and potentially rapid product obsolescence. In addition, many FinTech companies store sensitive consumer information and could be the target of cybersecurity attacks and other types of theft, which could have a negative impact on these companies. Many FinTech companies currently operate under less regulatory scrutiny than traditional financial services companies and banks, but there is significant risk that regulatory oversight could increase in the future. Higher levels of regulation could increase costs and adversely impact the current business models of some FinTech companies. These companies could be negatively impacted by disruptions in service caused by hardware or software failure, or by interruptions or delays in service by third-party data center hosting facilities and maintenance providers. FinTech companies involved in alternative currencies may face slow adoption rates and be subject to higher levels of regulatory scrutiny in the future, which could severely impact the viability of these companies. FinTech companies, especially smaller companies, tend to be more volatile than companies that do not rely heavily on technology. The customers and/or suppliers of FinTech companies may be concentrated in a particular country, region or industry. Any adverse event affecting one of these countries, regions or industries could have a negative impact on FinTech companies.

Infrastructure Investment Risk. The Fund's investments in infrastructure-related securities will expose the Fund to potential adverse economic, regulatory, political, legal and other changes affecting such investments. Issuers of securities in infrastructure-related businesses are subject to a variety of factors that may adversely affect their business or operations, including high interest costs in connection with capital construction programs, high leverage, costs associated with environmental or other regulations and the effects of economic slowdowns. Rising interest rates could lead to higher financing costs and reduced earnings for infrastructure companies.

Medical Product and Device Industry Risk. Companies that manufacture or develop medical products or devices subject to extensive regulation in the United States by the FDA and by comparable government agencies in other countries. The regulations govern the development, design, approval, manufacturing, labeling, importing and exporting and sale and marketing of many of our medical products. These regulations are also subject to future change. Failure to comply with applicable regulations and quality assurance guidelines could lead to manufacturing shutdowns, product shortages, delays in product manufacturing, product seizures, recalls, operating restrictions, withdrawal or suspension of required licenses, and prohibitions against exporting of products to, or importing products from, countries outside the United States. Medical product and medical device companies could be required to expend significant financial and human resources to remediate failures to comply with applicable regulations and quality assurance guidelines.

Pharmaceutical Industry Risk. Companies in the pharmaceutical industry are heavily dependent on patent protection. The expiration of patents may adversely affect the profitability of the companies. Pharmaceutical companies are also subject to extensive litigation based on product liability and other similar claims. Many new products are subject to approval of the Food and Drug Administration, a process that can be long and costly. Expanding international operations may lead to risks resulting from differences between U.S. and foreign legal, political and economic systems, regulatory regimes and market practices.

Proprietary Infrastructure Risk. The success of the Fund's investment strategy depends in part on the ability of the companies in which it invests to maintain proprietary technology used in their products and services. Companies in which the Fund invests will rely, in part, on patent, trade secret and trademark law to protect that technology, but competitors may misappropriate their intellectual property, and disputes as to ownership of intellectual property may arise. Consequently, companies in which the Fund invests may, from time to time, be required to institute litigation in order to enforce their patents, copyrights or other intellectual property rights, to protect their trade secrets, to determine the validity and scope of the proprietary rights of others or to defend against claims of infringement. Such litigation could result in substantial costs and diversion of resources. Similarly, if a company is found to infringe upon or misappropriate a third-party's patent or other proprietary rights, that company could be required to pay damages to such third-party, alter its own products or processes, obtain a license from the third-party and/or cease activities utilizing such proprietary rights, including making or selling products utilizing such proprietary rights.

Sector Focus Risk: The Fund may invest a significant portion of its assets in one or more sectors and thus will be more susceptible to the risks affecting those sectors than funds that have more diversified holdings across a number of sectors. The Fund anticipates that it may be subject to some or all of the risks described below.

Financials Sector Risk. Financial services companies are subject to extensive governmental regulation, which may limit both the amounts and types of loans and other financial commitments they can make, the interest rates and fees they can charge, the scope of their activities, the prices they can charge and the amount of capital they must maintain. Profitability is largely dependent on the availability and cost of capital funds and can fluctuate significantly when interest rates change or due to increased competition. In addition, deterioration of the credit markets generally may cause an adverse impact in a broad range of markets, including U.S. and international credit and interbank money markets generally, thereby affecting a wide range of financial institutions and markets.

Industrials Sector Risk. Industrials companies convert unfinished goods into finished durables used to manufacture other goods or provide services. Examples of industrials companies include companies involved in the production of electrical equipment and components, industrial products, manufactured housing and telecommunications equipment, as well as defense and aerospace companies. General risks of industrials companies include the general state of the economy, exchange rates, commodity prices, intense competition, consolidation, domestic and international politics, government regulation, import controls, excess capacity, consumer demand and spending trends. In addition, industrials companies may also be significantly affected by overall capital spending levels, economic cycles, rapid technological changes, delays in modernization, labor relations, environmental liabilities, governmental and product liability and e-commerce initiatives.

Absence of Prior Active Market Risk. While the Fund's shares are listed on the Exchange, there can be no assurance that an active trading market for shares will develop or be maintained. The Fund's Distributor does not maintain a secondary market in shares.

Active Management Risk. The Fund is actively managed, which means that investment decisions are made based on investment views. There is no guarantee that the investment views will produce the desired results or expected returns, which may cause the Fund to fail to meet its investment objective or to underperform its benchmark index or funds with similar investment objectives and strategies. Furthermore, active trading that can accompany active management may result in high portfolio turnover, which may have a negative impact on performance. Active trading may result in higher brokerage costs or mark-up charges, which are ultimately passed on to shareholders of the Fund. Active trading may also result in adverse tax consequences.

Authorized Participant Concentration Risk. Only an Authorized Participant (as defined below) may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that act as Authorized Participants. To the extent that these institutions exit the business or are unable to proceed with creation and/or redemption orders with respect to the Fund and no other Authorized Participant is able to step forward to create or redeem Creation Units, Fund shares may trade at a discount to net asset value per share ("NAV") and possibly face trading halts and/or delisting.

Common Stock Risk: Common stock holds the lowest priority in the capital structure of a company, and, therefore, takes the largest share of the company's risk and its accompanying volatility. The value of the common stock held by the Fund may fall due to general market and economic conditions, perceptions regarding the industries in which the issuers of securities held by the Fund participate, or facts relating to specific companies in which the Fund invests.

Currency Risk. The Fund may invest its assets in securities denominated in non-U.S. currencies. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of the Fund's investment and the value of the shares. Because the Fund's NAV is determined in U.S. dollars, the Fund's NAV could decline if the currency of the non-U.S. market in which the Fund invests depreciates against the U.S. dollar, even if the value of the Fund's holdings, measured in the foreign currency, increases. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

Cybersecurity and Disaster Recovery Risks. Information and technology systems relied upon by the Fund, the Adviser, the Fund's other service providers (including, but not limited to, the Fund Accountant, Custodian, Transfer Agent, Administrator and Distributor), market makers, Authorized Participants, financial intermediaries and/or the issuers of securities in which the Fund invests may be vulnerable to damage or interruption from computer viruses, network failures, computer and telecommunication failures, infiltration by unauthorized persons, security breaches, usage errors, power outages and catastrophic events such as fires, tornadoes, floods, hurricanes and earthquakes. Although the Adviser and the Fund's other service providers have implemented measures to manage risks relating to these types of events, if these systems are compromised, become inoperable for extended periods of time or cease to function properly, significant investment may be required to fix or replace them. The failure of these systems and/or of disaster recovery plans could cause significant interruptions in the operations of the Fund, the Adviser, the Fund's other service providers, market makers, Authorized Participants, financial intermediaries and/or issuers of securities in which the Fund invests and may result in a failure to maintain the security, confidentiality or privacy of sensitive data, impact the Fund's ability to calculate its NAV or impede trading.

Depository Receipt Risk. The Fund may invest in depository receipts which involve similar risks to those associated with investments in foreign securities. Investments in depository receipts may be less liquid than the underlying shares in their primary trading market.

ADRs and GDRs may be subject to some of the same risks as direct investment in foreign companies, which includes international trade, currency, political, regulatory and diplomatic risks. In a sponsored ADR or GDR arrangement, the foreign issuer assumes the obligation to pay some or all of the depository's transaction fees. Under an unsponsored ADR or GDR arrangement, the foreign issuer assumes no obligations and the depository's transaction fees are paid directly by the ADR or GDR holders. Because unsponsored ADR and GDR arrangements are organized independently and without the cooperation of the issuer of the underlying securities, available information concerning the foreign issuer may not be as current as for sponsored ADRs and GDRs and voting rights with respect to the deposited securities that are not passed through.

Early Close/Trading Halt Risk: An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may result in the Fund being unable to buy or sell certain securities or financial instruments. In such circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses.

Emerging Markets Securities Risk: Emerging markets are subject to greater market volatility, lower trading volume, political and economic instability, uncertainty regarding the existence of trading markets, and more governmental limitations on foreign investment than more developed markets. In addition, securities in emerging markets may be subject to greater price fluctuations than securities in more developed markets. Investing in emerging markets also involves other risks, including limited availability and reliability of information material to an investment decision, less developed legal systems with fewer security holder rights, and less uniformity in accounting and reporting requirements.

ESG Risk. Because the Fund evaluates ESG factors to assess and exclude certain investments for non-financial reasons, the Fund may forego some market opportunities available to funds that do not use these ESG factors. Information used by the Fund to evaluate ESG factors, including data provided by third-party vendors, may not be readily available, complete or accurate, and may vary across providers and issuers and within industries, which could negatively impact the Fund's ability to apply its methodology and in turn could negatively impact the Fund's performance. Currently, there is a lack of common industry standards relating to the development and application of ESG criteria which may make it difficult to compare the Fund's principal investment strategies with the investment strategies of other funds that apply certain ESG criteria or that use a different third-party vendor for ESG.

Fluctuation of Net Asset Value Risk. The NAV of the Fund's shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of the shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of and demand for shares on NYSE Arca, Inc. (the "Exchange"). The Adviser cannot predict whether the shares will trade below, at or above their NAV. The Fund's market price may deviate from the value of its underlying portfolio holdings, particularly in times of market stress, with the result that investors may pay significantly more or receive significantly less than the underlying value of the Fund shares bought or sold. This can be reflected as a spread between the bid and ask prices for the Fund quoted during the day or a premium or discount in the closing price from the Fund's NAV. In addition, transactions by large shareholders may account for a large percentage of the trading volume on the Exchange and may, therefore, have a material effect on the market price of the Fund's shares.

Foreign Securities Risk: Investments in securities (including ADRs and GDRs) of foreign issuers involve risks not ordinarily associated with investments in securities and instruments of U.S. issuers. The values of foreign investments may be affected by changes in exchange control regulations, application of foreign tax laws (including withholding tax) changes in governmental administration or economic or monetary policy (in this country or abroad) or changed circumstances in dealings between nations. The value of foreign securities is also affected by the value of the local currency relative to the U.S. Dollar. GDRs may be other than dollar denominated and may be issued in several countries.

Geographic Investment Risk: To the extent the Fund is significantly comprised of securities of issuers from a single country, the Fund would be more likely to be impacted by events or conditions affecting that country.

Investment Risk. An investment in the Fund is subject to investment risk including the possible loss of the entire principal amount that you invest.

Issuer-Specific Risk. Fund performance depends on the performance of individual securities to which the Fund has exposure. Issuer-specific events, including changes in the financial condition of an issuer, can have a negative impact on the value of the Fund.

Large-Capitalization Risk: Returns on investments in securities of large companies could trail the returns on investments in securities of smaller and mid-sized companies. The securities of large-capitalization companies may also be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.

Market Risk and Selection Risk. Market risk is the risk that one or more markets in which the Fund invests will go down in value, including the possibility that the markets will go down sharply and unpredictably. The value of a security or other asset may decline due to changes in general market conditions, economic trends or events that are not specifically related to the issuer of the security or other asset, or factors that affect a particular issuer or issuers, exchange, country, group of countries, region, market, industry, group of industries, sector or asset class. Local, regional or global events such as war, acts of terrorism, the spread of infectious illness or other public health issue, e.g. COVID-19, recessions, or other events could have a significant impact on the Fund and its investments. Selection risk is the risk that the securities selected by Fund management will underperform the markets, the relevant indices or the securities selected by other funds with similar investment objectives and investment strategies. This means you may lose money.

Market Trading Risk: Shares of the Fund may trade on the Exchange above or below their NAV. The NAV of shares of the Fund will fluctuate with changes in the market value of the Fund's holdings. In addition, although the Fund's shares are currently listed on the Exchange, there can be no assurance that an active trading market for shares will develop or be maintained. Trading in Fund shares may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares of the Fund inadvisable.

New Fund Risk: A new or smaller fund is subject to the risk that its performance may not represent how the fund is expected to or may perform in the long term. In addition, new funds have limited operating histories for investors to evaluate and new and smaller funds may not attract sufficient assets to achieve investment and trading efficiencies. There can be no assurance that the Fund will achieve an economically viable size. Further, an active trading market for shares of the Fund may not develop or be maintained.

Non-Diversified Fund Risk. The Fund is a non-diversified investment company under the Investment Company Act of 1940 (the "1940 Act"), meaning that, as compared to a diversified fund, it can invest a greater percentage of its assets in securities issued by or representing a small number of issuers. As a result, the performance of these issuers can have a substantial impact on the Fund's performance.

Pandemics Risk. An outbreak of infectious respiratory illness caused by the novel coronavirus known as COVID-19 was first detected in China in December 2019 before spreading worldwide and being declared a global pandemic by the World Health Organization in March 2020. COVID-19 has resulted in travel restrictions, closed international borders, enhanced health screenings, disruption and delays in healthcare services, prolonged quarantines, cancellations, temporary store closures, social distancing, government ordered curfews and business closures, disruptions to supply chains and consumer activity, shortages, highly volatile financial markets, and general concern and uncertainty.

Securities Lending. Although the Fund will receive collateral in connection with all loans of its securities holdings, the Fund would be exposed to a risk of loss should a borrower default on its obligation to return the borrowed securities (e.g., the loaned securities may have appreciated beyond the value of the collateral held by the Fund). In addition, the Fund will bear the risk of loss of any cash collateral that it invests.

Small- and Mid-Capitalization Company Risk. The small- and mid-capitalization companies in which the Fund invests may be more vulnerable to adverse business or economic events than larger, more established companies, and may underperform other segments of the market or the equity market as a whole. Securities of small- and mid-capitalization companies generally trade in lower volumes, are often more vulnerable to market volatility, and are subject to greater and more unpredictable price changes than larger capitalization stocks or the stock market as a whole.

Valuation Risk. The price the Fund could receive upon the sale of a security or other asset may differ from the Fund's valuation of the security or other asset, particularly for securities or other assets that trade in low volume or volatile markets or that are valued using a fair value methodology as a result of trade suspensions or for other reasons.

Value-Oriented Investment Strategies Risk. The Fund seeks to invest in stocks that are believed to be undervalued in comparison to their fundamentals and growth opportunities. Value investing is subject to the risk that the market will not recognize a security's inherent value for a long time or at all, or that a stock judged to be undervalued may actually be appropriately priced or overvalued. In addition, during some periods (which may be extensive), value stocks generally may be out of favor in the markets.

Performance

Because the Fund has only recently commenced investment operations, no performance information is presented for the Fund at this time. In the future, performance information will be presented in this section of this Prospectus. Also, shareholder reports containing financial and performance information will be mailed to shareholders semi-annually. Updated performance information will be available at no cost by visiting the Fund's website at <http://www.tema.co>.

Management

Investment Adviser – Tema Global Limited is the investment adviser to the Fund.

Portfolio Managers – Yuri Khodjamirian (since inception) and Maurits Pot (since inception).

Sub-Adviser – Neos Investment Management LLC

Portfolio Managers – Garrett Paoletta (since inception), Troy Cates (since inception), and Ryan Houlton (since inception)

Purchase and Sale of Fund Shares

The Fund issues and redeems shares at NAV only in a large specified number of shares each called a "Creation Unit," or multiples thereof, and only with authorized participants ("Authorized Participants") which have entered into contractual arrangements with Foreside Fund Services, LLC, the Fund's distributor ("Distributor"). A Creation Unit consists of 10,000 shares. Creation Unit transactions are expected to be typically conducted in exchange for the deposit or delivery of in-kind securities in the Fund's portfolio. The Fund may, in certain circumstances, offer Creation Units partially or solely for cash.

Individual shares of the Fund may only be purchased and sold on a national securities exchange through brokers. Shares of the Fund are listed on Cboe BZX Exchange, Inc. (“Exchange”) and because shares will trade at market prices rather than NAV, shares of the Fund may trade at a price greater than or less than NAV.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Payments to Broker-Dealer and Other Financial Intermediaries

If you purchase shares through a broker-dealer or other financial intermediary, the Adviser or other related companies may pay the intermediary for the sale of shares or related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.
